

CUSTOM MATERIAL PROCESSING

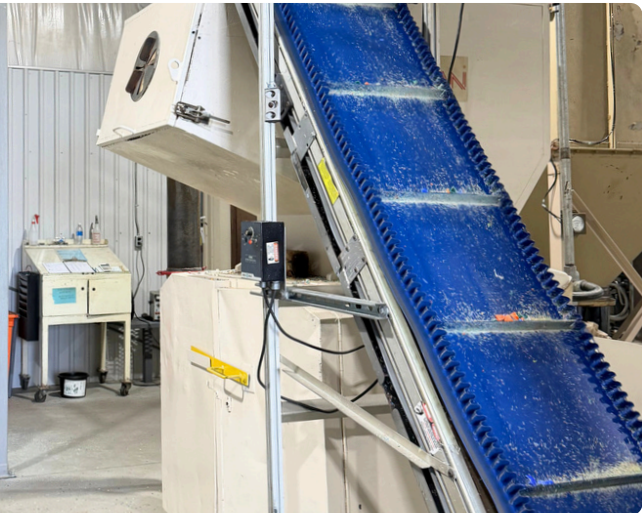

Our Labs Are Your Labs

We test and upgrade raw material, post-industrial recycled materials (PIR), post-consumer recycled materials (PCR), develop new colours through compounding, and handle the entire recycling process from grinding and pulverizing to stabilizing and mixing new compounds to your specifications.

Who We Are

Rescraft Plastic Products Inc. is a full-service rotomolder dedicated to helping customers with their product design requirements. Our multifaceted approach takes fully dimensioned drawings from concept to production, delivering a seamless and cost-effective solution.

Toll Compounding Services

Rescraft Plastics provides custom toll compounding and blending services for manufacturers across a wide range of industries. Supply your raw materials, formulations, and specifications, and our experienced team will process them into consistent, high-quality compounds ready for production.

Recycled Material Specialists

Rescraft Plastics is committed to sustainable manufacturing through the use of post-industrial (PIR) and post-consumer recycled (PCR) materials. By giving plastics a second life, we help support a more circular and responsible plastics industry.

Quality Assurance Built In

Our QA program ensures your exact material properties are always met. From the first run to the last, you get the same reliable output every time. Molded samples are preformed throughout our various processes to bring customers a proven quality product

Flexible Production And Delivery

We offer custom compounding stock inventory, storage, and distribution support, giving you one less thing to manage in your supply chain. A variety of packaging solutions are available, including Gaylords and Super Sacs.

Your Local Processing Partner

Based in southwestern Ontario, we work with manufacturers, designers, and molders across industries. Shorter lead times, easier communication, and a team that's easy to reach when you need us.

Colour You Can Count On

At Rescraft, we use the X-Rite Ci62 spectrophotometer to verify colour accuracy on every order, ensuring consistent, batch-to-batch results you can count on.
